**Question 1**

Correct

Mark 1.00 out of  
1.00

Which of the following options are the steps involved in Requirements Analysis?

Select one or more:

- ☒ a. Analysis of the gathered requirements ✓
- ☒ b. Requirements Gathering ✓
- ☐ c. Requirements Elicitation
- ☐ d. Requirements Specification

45099

45099

Your answer is correct.

Requirements Gathering phase is followed by the Analysis of the gathered requirements

The correct answers are:

Requirements Gathering, Analysis of the gathered requirements

45099

**Question 2**

Correct

Mark 1.00 out of 1.00

From the below options, identify the role of the system analyst.

- ☐ a. Creates high level test cases
- ☒ b. Creates SRS ✓
- ☐ c. Writes pseudo code for the given module
- ☐ d. Creates HLD document

45099

Your answer is correct.

The correct answer is:

Creates SRS

**Question 3**

Correct

Mark 1.00 out of 1.00

Identify the correct statements from the below options.

- ☐ a. High level design, Low level design followed by Analysis is performed.
- ☐ b. Analysis is performed followed by low level design and then high level design
- ☒ c. Analysis is performed followed by High level design and then Low level design ✓
- ☐ d. Analysis or High level design or Low level design can be performed in any order

45099

Your answer is correct.

The correct answer is:

Analysis is performed followed by High level design and then Low level design

**Question 4**

Correct

Mark 1.00 out of  
1.00

Match the correct objectives of each phase involved in Requirements Engineering

Requirements  
Specification

Documents all the requirements properly

Requirements  
Analysis

Analyzing the customer and the user/stakeholder to arrive at a definition of software requirements

Requirements  
Elicitation

Gathering requirements from the users, customers and other stake holders

Your answer is correct.

1. Requirements Elicitation - Gathering requirements from the users and customers
2. Requirements Analysis - Analyzing the customer and the user/stakeholder to arrive at a definition of software requirements
3. Requirements Specification - Documents all the requirements properly in SRS

The correct answer is:

Requirements Specification → Documents all the requirements properly,

Requirements Analysis → Analyzing the customer and the user/stakeholder to arrive at a definition of software requirements,

Requirements Elicitation → Gathering requirements from the users, customers and other stake holders

**Question 5**

Correct

Mark 1.00 out of  
1.00

Identify the type of design that helps in transforming the data model created during requirements analysis phase into the data structures that will be used to implement the software

Select one:

- ☐ a. Architectural design
- ☐ b. Interface design
- ☐ c. GUI Design
- ☒ d. Data Design ✓

Your answer is correct.

Data Design helps in creating the data architecture for a system to represent the data components

The correct answer is: Data Design

**Question 6**

Correct

Mark 1.00 out of 1.00

Match the objectives of the types of design involved

Low Level Design

Focuses on writing a detailed algorithm

Interface design

Describes how the software communicates with itself, and with the users interacting with the software

Architecture design

Defines the modules of the system and the functions that each module perform

45099

45099

Your answer is correct.

Architecture design defines the modules of the system and the functions that each module perform

The interface design describes how the software communicates with itself, and with the users interacting with the software

Low Level Design focuses on writing a detailed algorithm

The correct answer is: Low Level Design → Focuses on writing a detailed algorithm,

45099

Interface design → Describes how the software communicates with itself, and with the users interacting with the software,

Architecture design → Defines the modules of the system and the functions that each module perform
