Question 1

Incorrect

Mark 0 out of 1

In Python, recall who detects the syntax error and when.

Select one:

- ☐ interpreter/at runtime
- ☒ interpreter/at compile time ✖
- ☐ compiler/at compile time
- ☐ compiler/at runtime

Your answer is incorrect.

The syntax of the Python programming language is the set of rules which defines how a program will be written. Syntax errors arise when the Python parser is unable to understand a line of code. Syntax errors are reported by the interpreter at runtime. .

The correct answer is: interpreter/at runtime

Question 2

Correct

Mark 1 out of 1

Identify the symbol that a Python single line comment begins with.

Select one:

- ☐ //
- ☐ /*
- ☒ # ✓
- ☐ \$\$

45099

Your answer is correct.

Single-line comments must be created by beginning a line with the hash (#) character and they are automatically terminated by the end of that line.

The correct answer is: #

Question 3

Correct

Mark 1 out of 1

Identify the style that the python paragraph comment uses.

Select one:

- ☐ /* comments */
- ☐ # comments #
- ☒ "" comments "" ✓
- ☐ // comments //

Your answer is correct.

For writing python paragraph comments, you may use triple quoted string. Add the triple quoted string at the beginning and end of the comment.

The correct answer is: "" comments ""

Question 4

Correct

Mark 1 out of 1

Select the command to be used to start Python from the command prompt.

Select one:

- ☐ execute python
- ☐ run python
- ☐ go python
- ☒ python ✓

45099

Your answer is correct.

The command python must be used to start Python from the command prompt.

The correct answer is: python
