Question 1	Create a list L1 with the elements 1,2,3,4,5,6.
Correct	
Mark 1.00 out of 1.00	L1=[1,2,3,4,5,6] ✔

45099

Question 2

Correct

Mark 1.00 out of 1.00

Display the third element of the list L1 using negative indexing.

print(L1[-4] ✔)

Question 3

Correct

Mark 1.00 out of 1.00

Given the list : L1=[1,2,3,4,5,6], how will you display from the third element to the end of the list without specifying the end index?

print(L1[2:] ✔)

Question 4

Correct

Mark 1.00 out of 1.00

Given the list : L1=[1,2,3,4,5,6], how will you display the third and forth element by specifying positive start and end index ?

print(L1[2:4] ✔)

Question 5

Correct

Mark 1.00 out of 1.00

Given the list: L1=[1,2,3,4,5,6], fill up the code to create a new list L2 that contains only the even numbers from the list L1 using the concept of list comprehension.

(Note: Do not leave blank spaces between the operators and operands when writing an expression)

L2=[element for element in L1 `if element%2==0` ✔]
